# **AU680 Daily Startup**

# ✓ Perform Analyzer Daily Maintenance

- 1. Inspect syringes for cracks, leaks, or condensation
- 2. Inspect wash solution roller pump tubing for cracks or leaks
- 3. Inspect the wash solution volume, replenish if needed
- 4. Inspect the stability of the upper cover
- 5. Inspect and clean the probes and mix bars
  - Confirm that probes are not bent or damaged
  - Wipe probes with 70% isopropyl alcohol if contaminants or crystallization observed
  - Confirm that mix bars are not bent, scratched, or chipped
  - Wipe mix bars with 70% isopropyl alcohol if contaminants or crystallization observed
- 6. Prime the probes and mix bars to confirm proper operation
  - Select Home > Analyzer Maintenance
  - Place a check mark in the **Analyzer Maintenance** box
  - Select **Prime Washing-line** maintenance option
  - Select OK to confirm selection
  - Press the green TABLE ROTATION/DIAG button to start the prime
    - Confirm each probe dispenses a thin straight stream of water and water flows in the wash wells
    - Confirm that the mix bars align correctly in the wash wells during rotation of mix bar components
  - Deselect the Analyzer Maintenance box when the priming cycle is complete
- 7. Replace the DI water in the pre-dilution bottle
- 8. Inspect the volumes of the sample probe wash solutions, replenish if needed (located by the sample probe in positions labeled **64.Det.-1** and **65. Det.-2**)
- Inspect the volumes of the contamination parameter solutions, replenish if needed (located by the reagent probes in positions labeled 62. CLN-1, 63. CLN-2, 49. CLN-1, and 50. CLN-2)
- 10. Confirm the printer is on and there is enough paper

# ✓Inspect the Analyzer Status

- 1. Select Home > Analyzer Status
- Confirm that system components are within acceptable limits (blue)
- 3. Investigate any yellow or red conditions

# ✓ Perform a Reagent Check

- 1. Select Home > Reagent Management > Details.
  - For each sample type processed in your lab:
    Review the **Shots** column for tests remaining
  - Review the **Onboard Remaining** column for open bottle expiration
  - Review the **Expiration** column for lot expiration
- Replace and/or add reagent bottles based on volume and expiration criteria for your lab
  - Lift and remove the reagent refrigerator covers
  - Remove required reagent bottles
  - Place new reagents bottles into available positions and secure with partitions and adapters as needed
  - Place non bar coded reagents bottles into fixed positions assigned in the **Details** tab
  - Replace the reagent refrigerator covers
- 3. Perform a reagent check
  - Select Reagent Check F5
  - Select Check All Positions
  - Select Start
- View the Main and Details tabs to confirm status of onboard reagents meet the daily requirements for your lab

Continue on the reverse side

# AU680 Daily Startup, continued

### ✓ISE Startup (for labs with ISE Module)

- 1. Inspect the ISE reagents, and replace if needed
  - Confirm reagents are within 90-day onboard stability limit and volume meets the daily requirements for your lab
  - If ISE MID Standard or ISE Reference Solution is replaced perform a MID/REF Prime
  - If ISE Buffer Solution is replaced perform a Buffer Prime
- 2. Perform the ISE Clean
  - Place a Hitachi cup with 1 mL of ISE Cleaning Solution in the CLEAN position of the STAT table
  - Select Home > Analyzer Maintenance > ISE Maintenance
  - Select Cleaning F5
  - Select **OK** to begin the clean
  - When cleaning is complete, remove and discard the Hitachi cup
- 3. Perform a Total Prime
  - Select Home > Analyzer Maintenance > ISE Maintenance
  - Place a check mark in the ISE Maintenance box
  - Select **Total Prime** maintenance option
  - Select **OK** to confirm selection
  - Press the green TABLE ROTATION/DIAG button to start the prime
  - Deselect the ISE Maintenance box when the priming is complete
- 4. Perform an ISE Calibration
  - Place Hitachi cups filled with approximately 500 μL of the required ISE Serum and/or Urine Standards into the S-L, S-H, U-L, and U-H positions of the STAT table
  - Select Calibration tab from ISE Maintenance
  - Select Serum Start, Urine Start, or Serum/Urine Start
  - Select **OK** to begin the ISE calibration
  - When the calibration is complete, confirm the results are within the Slope and MID Factor ranges for serum and/or urine
  - Remove and discard the Hitachi cups

### **✓** Perform Analyzer Calibration

- 1. Select Home > Rack Requisition Sample > Calibration
- 2. Confirm automatic calibration order is correct (RB highlighted in blue, CAL highlighted in yellow). Select the sample type from the **Type** drop down menu to review the order for each sample type processed in your lab
- 3. Select **Display Cup Set F5** to display the required reagent blank, calibrators, racks, and positions. Scroll down to view additional racks. Load the reagent blank and calibrators in the blue and yellow racks according to the list
- 4. Place the racks on the rack supply component with the blue rack first, followed by yellow racks
- 5. Select Close to close the Display CAL Racks dialog
- 6. Select Start to process the reagent blank and calibrator racks

#### ✓ Perform Quality Control

- 1. Select Home > Rack Requisition Sample > QC
- 2. Confirm automatic QC order is correct (test names highlighted in blue). Select the sample type from the **Type** drop down menu to review the order for each sample type processed in your lab
- 3. Select **Display QC Set F6** to display the required control materials, racks, and positions. Scroll down to view additional racks. Load the control materials in the green racks according to the list
- 4. Place the QC racks on the rack supply component
- 5. Select Close to close the Display QC Racks dialog
- 6. Select Start to process the QC racks

#### ✓ Review RB/CAL/QC Results

- 1. Review the reagent blank, calibration, and QC reports for flags. Take appropriate actions based on flags
- 2. Review the Calibration Monitor to confirm reagent blank and calibration results meet lab requirements (Menu List > Calibration > Calibration Monitor > select Reagent Blank or Calibration column for desired test)
- 3. Review the QC Monitor to confirm QC results meet lab requirements (Menu List > QC > QC Monitor)
