Power Express Module Control Panel Buttons

BUTTON	DESCRIPTION
	Auto: Select to place the module in Auto (RUN) mode. In Auto mode, the module processes sample tubes without user intervention
	Manual: Select to place the module in Manual (STOP) mode. You must place the module in Manual mode before you perform any maintenance functions
	Maintenance: Access the Maintenance functions for the module
	Pause: Select to temporarily PAUSE the module
	Restart: Select to start the module after a PAUSE, error release, or rack exchange.
	Rack Exchange: Select to perform a rack exchange at the Inlet, Outlet, or Storage module
	Left Drawer: Select to unlock the left Inlet or Outlet drawer to perform a rack exchange or to perform a rack exchange at the Storage module
	Right Drawer: Select to unlock the right Inlet or Outlet drawer to perform a rack exchange
The following icons only display during a Rack Exchange at the Outlet and Storage module control panels:	
	Rack Exchange Not Required: Indicates the rack is not full; no rack exchange needed for this position
	Rack Exchange Required: Indicates the full rack position requiring an exchange
	Rack Exchange In Progress: Indicates the rack has been removed, but the empty rack has not been loaded
	Rack Exchange Completed: Indicates the rack has been removed and replaced with an empty rack. The system will clear all positions with this icon when **Restart** is selected NOTE: To cancel the clearing of a rack, select the position so that it changes back to the **Rack Exchange Not Required** icon (white box).

Power Express Module Control Panel Buttons
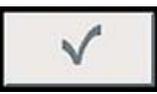

BUTTON	DESCRIPTION
	Mute: Select to silence the alarm when an error occurs or during a rack exchange
	Help: Select to display a brief description of the error
	Unlock: Select to PAUSE the module and unlock the front door or cover. For the Centrifuge module, press and hold this button to unlock the centrifuge lid
	Top Unlock: For the Centrifuge module, select to PAUSE the module and unlock the centrifuge cover. You must then select the **Unlock** button to unlock the centrifuge lid
	Enter: Select to enter your information into the system
	Exit: Select to return to the previous screen
	Priority: Select to override Load Timeout and start operation immediately. This button applies to the Centrifuge and Rack Builder modules, and to the Level Detector component of the Aliquot module
	Clear (error release): If you need to remove a sample tube that has caused an error, select to bypass the sample tube, clear the error, and restart the module
	Bypass: Select to bypass the module
	Repeat: Select to repeat the action of the function code you entered
	Yes/OK: Select to confirm your selection or changes
	No/Cancel: Select to cancel your selection or changes
